

Userspace responsiveness .bashrc alternative (Ubuntu 10.10: Working)

Cite as: Martin Paul Eve, "Userspace responsiveness .bashrc alternative (Ubuntu 10.10: Working)", *eve.gd: Martin Paul Eve*, November 19, 2010, <https://doi.org/10.59348/ptgaz-f7v52>.

Recent discussion on the lkm has lead to Linus giving the go-ahead to a large kernel patch that massively increases responsiveness when multi-tasking on Linux desktop. A [slashdot article](#) today also points out that the same result can be achieved by modifications userspace and that this is, indeed, how the patch was tested.

The original instructions can be found at [webupd8](#), but, for Ubuntu systems, they are incomplete.

Here's the correct information.

/etc/rc.local should contain:

```
mkdir -p /dev/cgroup/cpu
mount -t cgroup cgroup /dev/cgroup/cpu -o cpu
mkdir -m 0777 /dev/cgroup/cpu/user
echo "/usr/local/sbin/cgroup_clean" > /dev/cgroup/cpu/release_agent
```

and should be executable (sudo chmod +x /etc/rc.local).

Your ~/.bashrc should contain:

```
if [ "$PS1" ] ; then
mkdir -p -m 0700 /dev/cgroup/cpu/user/$$ > /dev/null 2>&1
echo $$ > /dev/cgroup/cpu/user/$$/tasks
echo "1" > /dev/cgroup/cpu/user/$$/notify_on_release
fi
```

directly at the top.

Finally (and this is where the original instructions were incomplete), /usr/local/sbin/cgroup_clean should contain:

```
#!/bin/sh
if [ "$1" != "/user" ]; then
rmdir /dev/cgroup/cpu/$1
fi
```

as suggested by an [anonymous comment](#) on the original. Finally, ensure the cgroup cleanup script is executable: `sudo chmod +x /usr/local/sbin/cgroup_clean`

Reboot your system and you too can have an [ultra-responsive desktop](#)!
