A quick plug for my latest Android application, which is now available in the Android Market: [Crossword Helper](#). This is, fairly obviously, an application designed to help you finish crosswords when you are stuck.

You can get the app by scanning this QR code on your device:

 [Crossword Solver QR Code](#)

The application has a built-in dictionary of approximately 300,000 words against which you can match your existing grid and/or an anagram.

Example uses:

Blanks

Enter "t?s?" for "test"

Anagrams

Enter "elvis" to get "lives"

Blanks and Anagrams

Enter "orchestra" for anagram and "c???-h???" to get "cart-horse"

It's also my first experiment at selling something on the Android Market. In theory, I do not approve of this practice and prefer software to be free. For that reason, the similar service at <http://ana.grammatic.org> will remain online and free to access. However, I am craving some extra revenue at the moment, so if you want offline support on your Android device, please give this your consideration.
