I am extremely pleased to announce that my book, *Open Access and the Humanities: Contexts, Controversies and the Future* has today been published by Cambridge University Press. The book offers a background to open access and its specifics for the humanities disciplines, as well as setting out the economics and politics of the phenomenon. It also has a very fine preface by Peter Suber! You can download the book for absolutely free (under a CC BY-SA license) at [the official website](#) (click the green "open access" button). You can also buy an extremely good value paperback copy, with all my royalties going to [Arthritis Research UK](#), from the [usual suspects](#). The book also has a DOI: <http://dx.doi.org/10.1017/CBO9781316161012>. You can also [download a copy directly here](#).

For those who would like a taster, there's an (embarrassing -- or at least I find it so) [video interview that I did](#), also available on the Cambridge website.

Also perhaps of interest may be [Jonathan Gray's review of the volume](#) for the LSE Review of Books. Gray writes:

Eve's book gives a synoptic and multi-layered overview of many of the different factors at play in scholarly communication in the humanities, and offers valuable suggestions about how a transition to open access in the humanities might take better account of these factors, bringing much needed critical and constructive reflection to the contemporary pursuit of a long held dream. It is essential reading for anyone interested in the future of open access and scholarly communication in the humanities, and a rallying call for more researchers to join those working to shape this future.

I hope you enjoy reading it!
