

My 2020 year in review

I wrote, last year, that [2019 was pretty bad for me](#). Little did any of us know of the grimness that 2020 would bring with the coronavirus pandemic. I have spent almost all of this year “shielding”, which can feel somewhat isolating, although I am fortunate to live with my wife, which ameliorates this greatly. I only venture out every day to walk Toby, the fifteen-year-old Jack Russell terrier whom we adopted from the rescue shelter, two days before going into lockdown. Most problematically, I have not been able to have a battery of required hospital tests that could make me feel a lot better, because the risk is too great. Before lockdown started and the pandemic struck, I also began to suffer from serious depressive symptoms. These were not linked to the pandemic – although that would have been reason enough! – but were rather a result of the medications that I must take for my autoimmune conditions. This has, obviously, made this year even tougher. Writing about some of the good things can, every year, feel a little like bragging/showing off. It actually helps me to feel good about what I’ve done, though, and to take stock of what I have achieved.

The work schedule this year has been hectic to say the least. I will update this graph when the year is done as I still have some hours to add to it, but the green and blue lines represent the hours for which I am contracted, minus annual leave. So, that is: if I had precisely hit the green line or kept pace with the blue, I would have worked all the hours for which I am contracted and taken all my annual leave/College closure days. The red line is the hours I actually worked. The demands of

pivoting to online teaching, while I am Birkbeck's Strategic Lead for Digital Education, stacked up. The work on COPIM also took a lot of my time. Perhaps most worryingly, my time tracking points to having spent 79 full working days this year answering email.

I had some successes that I want to highlight for attention. In particular, my work package on COPIM launched [Opening the Future](#), its project to convert university presses to OA business models. This really does represent a way that existing presses could move to OA. If it has widespread uptake, it could be the most significant thing I do in my entire academic career. I also released a music track with one of my all-time musical heroes, Jon Fugler, of 90s electronic band, Fluke. This – [Night Train](#) – was dream-come-true territory. Of course, the sadness is that there are no nightclubs in which to hear it played. [Close Reading with Computers](#) was also republished this year, in an open-access format. OLH was “highly commended” at the Association of Learned and Professional Society Publishers and won Small Digital Publisher of the Year at the Association of Online Publishers. I was elected a Fellow of the English Association.

Books
