

Converting Excel date serial numbers to Python datetime format

Cite as: Martin Paul Eve, "Converting Excel date serial numbers to Python datetime format", *eve.gd: Martin Paul Eve*, August 10, 2023, <https://doi.org/10.59348/dbrja-s7w36>.

Excel stores dates in a very odd way: a serial number of days since 1900.

To convert an Excel datestamp to a Python datetime object, you can use this function:

```
def date_serial_number(serial_number: int) -> datetime:
    """
    Convert an Excel serial number to a Python datetime object
    :param serial_number: the date serial number
    :return: a datetime object
    """
    # Excel stores dates as "number of days since 1900"
    import datetime as dt

    delta = dt.datetime(1899, 12, 30) + dt.timedelta(days=serial_number)
    return delta
```

Hope this helps someone.
