2023 continued to pose the all-important question: just how many health disasters can I endure? This year, I started haemodialysis as my kidneys entered the extremely worryingly named “end-stage renal failure”. This turns out to be a very long-term prospect, as I can’t have a transplant owing both to BK viremia (which caused the kidney damage in the first place) and a conflict with the immunosuppression that treats my rheumatoid arthritis. Without the latter under control, life is, quite seriously, unbearable.

But enough of that grimness. I also got quite a lot done this year!

Crossref

- Built the [Labs API](#) and released [its source code](#)
- Conducted research into, and wrote a peer-reviewed article about, the [digital preservation status of 7m articles](#)
- Built a deposit proxy system that allows for the modelling and retrieval of new metadata
- Began work on [Project Op Cit](#); a digital preservation system
- Built a set of tools – [CLAWS](#) – for generic AWS operations
- Built [a wrapper for distributed computation](#) using Coiled and Dask
- Built [an observability library called Longsight](#)

- Integrated the Retraction Watch database in the Labs API
- Rebuilt/rewrote the Retraction Watch database system
- Built [a Large Language Model affiliation parser](#)
- Built [a JSON-L packer](#) for the Crossref annual data dump
- Built (most of) [a SQLite packer](#) for the Crossref annual data dump
- Gave 8 plenary/keynote talks
